

Medical Report: Clinical Case Review

Date: 2025-03-06

Patient Name	Christine Sutton
Age	80
Gender	Female
Marital Status	Single
Medical History	Hypertension
Family History	No family history

Diagnosis:

Chronic Fatigue Syndrome

Disease Details:

Chronic Fatigue Syndrome (CFS), also known as myalgic encephalomyelitis, is a condition characterized by persistent and unexplained fatigue that doesn't improve with rest. In addition to fatigue, symptoms can include muscle pain, difficulty sleeping, memory problems, and headaches. The exact cause of CFS is unknown, but it is thought to involve a combination of viral infections, immune system problems, and genetic factors. Treatment focuses on managing symptoms and improving quality of life, including lifestyle modifications and cognitive behavioral therapy.
